NAME
>   wiminfo – Display or change information about a WIM file or image

SYNOPSIS
>   **wiminfo** *WIMFILE* [*IMAGE* [*NEW_NAME* [*NEW_DESC*]]] [*OPTION*...]

DESCRIPTION
>   **wiminfo**, or equivalently **wimlib-imagex info**, displays information about *WIMFILE* or the specified
>   *IMAGE* in it, and optionally changes properties of *IMAGE* such as its name and description, or changes the
>   bootable image of the WIM.
>
>   If neither an image nor any flags other than **--check** are specified, then basic information about the WIM
>   and the images contained in it is shown. If an image is specified by *IMAGE* (as a 1-based image index or
>   an image name), then the information is restricted to that concerning the specified image.
>
>   Changes to the WIM are made if *NEW_NAME* and/or **--boot** and/or **--image-property** are specified.
>   *NEW_NAME* is taken to be the new name of the image specified by *IMAGE* while *NEW_DESC* is taken to
>   be its new description. If *NEW_DESC* is not specified, then the image's description is not changed.
>
>   **wiminfo** does not support modifying a split WIM, although you may display information about one, includ-
>   ing any of its parts.

OPTIONS
>   **--boot**
>>   Mark the specified *IMAGE* as the "bootable" image of the WIM. The "bootable" image is the image
>>   which the Windows bootloader will use when loading Windows PE from the WIM.
>
>   **--check**
>>   Verify the integrity of WIM if it contains extra integrity information. In addition, if modifying the
>>   WIM, include extra integrity information in the modified WIM, even if it was not present before.
>
>   **--nocheck**
>>   If modifying the WIM, remove its extra integrity information, if it had any.
>
>   **--image-property** *NAME=VALUE*
>>   Assign an arbitrary property to the specified *IMAGE* in the XML document of the WIM. *NAME* is
>>   an element path such as "WINDOWS/VERSION/MAJOR", and *VALUE* is the string to place in the
>>   element, such as "10". See the documentation for this option to **wimcapture**(1) for more details.
>>   This option may be specified multiple times.
>
>   **--header**
>>   Show detailed information from the WIM header.
>
>   **--blobs**
>>   List all the "blobs" (unique file data) in the WIM.
>
>   **--extract-xml**=*FILE*
>>   Extract the WIM's raw XML document to *FILE*.
>
>   **--xml**
>>   Extract the WIM's raw XML document to standard output.
