

NAME

wimlib-imagex-dir – Show the files contained in a WIM archive

SYNOPSIS

wimlib-imagex dir *WIMFILE IMAGE* [*OPTIONS*]

DESCRIPTION

Lists all the files and directories contained in the specified image of the Windows Imaging (WIM) file *WIMFILE*.

IMAGE specifies the WIM image to show the files of. It may be a 1-based index of an image in the WIM, the name of an image in the WIM, or the keyword "all" to indicate that files from all images are to be shown. Use the **wimlib-imagex info** (1) command to show what images a WIM file contains.

OPTIONS

--path=PATH

List the files recursively from the *PATH* directory instead of from the root directory.

NOTES

wimlib-imagex dir supports split WIMs, but it will only work on the first part of the split WIM.

The DOS names of files are not displayed.

Alternate data streams are not displayed.

EXAMPLES

List all files in the first image of 'boot.wim':

```
wimlib-imagex dir boot.wim 1
```
