

**NAME**

wimlib-imagex-join – Join split WIMs into a standalone one-part WIM

**SYNOPSIS**

**wimlib-imagex join** [*OPTION...*] *OUT\_WIMFILE SPLIT\_WIM...*

**DESCRIPTION**

Joins the *SPLIT\_WIMs* into a standalone one-part WIM *OUT\_WIMFILE*.

All parts of the split WIM must be specified. You probably want to do so using a shell wildcard.

**OPTIONS****--check**

When reading each *SPLIT\_WIM*, verify its integrity if the integrity table is present; additionally, when writing *OUT\_WIMFILE*, write an integrity table. If this option is not specified, no integrity table is included in the new WIM file, even if there was one before.

**EXAMPLES**

Join a split WIM, with the parts named ‘windows\*.swm’ where the \* is anything (usually the number of the part, except for the first part which may have no number), and write the joined WIM to the file ‘windows.wim’.

```
wimlib-imagex join windows.wim windows*.swm
```

**NOTES**

**wimlib-imagex join** is roughly equivalent to:

```
wimlib-imagex export SWM_PART_1 --ref="SWM_GLOB" [--check] all OUT_WIMFILE
```
