NAME

wimlib-imagex-dir – Show the files contained in a WIM archive

SYNOPSIS

wimlib-imagex dir *WIMFILE IMAGE* [*OPTIONS*]

DESCRIPTION

Lists the files and directories contained in the specified image of the Windows Imaging (WIM) file *WIMFILE*. This command is also available as simply **wimdir** if the appropriate hard link or batch file has been installed.

IMAGE specifies the image in *WIMFILE* to show the files of. It may be a 1-based index of an image in *WIMFILE*, the name of an image in *WIMFILE*, or the keyword "all" to indicate that files from all images in *WIMFILE* are to be shown. Use the **wimlib-imagex info** (1) command to show what images a WIM file contains.

OPTIONS

--path=*PATH*

List the files recursively from the *PATH* directory instead of from the root directory.

--detailed

List detailed information about each file.

--one-file-only

Show information about one file only. Intended for use with both **--path** and **--detailed**.

NOTES

wimlib-imagex dir supports split WIMs, but it will only work on the first part of the split WIM.

DOS names and alternate (named) data streams are not listed unless the **--detailed** mode is used.

EXAMPLES

List all files in the first image of 'boot.wim':

    wimlib-imagex dir boot.wim 1
