NAME
>   wimlib-imagex-join – Join split WIMs into a standalone one-part WIM

SYNOPSIS
>   **wimlib-imagex join** [*OPTION*...] *OUT_WIMFILE SPLIT_WIM_PART*...

DESCRIPTION
>   Joins the *SPLIT_WIM_PARTs* into a standalone one-part WIM *OUT_WIMFILE*. This command is also available as simply **wimjoin** if the appropriate hard link or batch file has been installed.
>
>   All parts of the split WIM must be specified. You probably want to do so using a shell wildcard.
>
>   **wimlib-imagex join** can join both non-pipable and pipable split WIMs.

OPTIONS
>   **--check**
>
>>   When reading each *SPLIT_WIM_PART*, verify its integrity if the integrity table is present; additionally, when writing *OUT_WIMFILE*, write an integrity table. If this option is not specified, an integrity table will be included in *OUT_WIMFILE* if and only if one was present in the first part of the split WIM.

EXAMPLES
>   Join a split WIM, with the parts named 'windows*.swm' where the * is anything (usually the number of the part, except for the first part which may have no number), and write the joined WIM to the file 'windows.wim'.
>
>   wimlib-imagex join windows.wim windows*.swm

NOTES
>   **wimlib-imagex join** is roughly equivalent to:
>
>>   **wimlib-imagex export** *SWM_PART_1* --ref="*SWM_GLOB*" all *OUT_WIMFILE*
