

**NAME**

wimlib-imagex-dir – Show the files contained in a WIM archive

**SYNOPSIS**

**wimlib-imagex dir** *WIMFILE IMAGE* [*OPTIONS*]

**DESCRIPTION**

Lists the files and directories contained in the specified image of the Windows Imaging (WIM) file *WIMFILE*. This command is also available as simply **wimdir** if the appropriate hard link or batch file has been installed.

*IMAGE* specifies the image in *WIMFILE* to show the files of. It may be a 1-based index of an image in *WIMFILE*, the name of an image in *WIMFILE*, or the keyword "all" to indicate that files from all images in *WIMFILE* are to be shown. Use the **wimlib-imagex info** (1) command to show what images a WIM file contains.

**OPTIONS**

**--path=PATH**

List the files recursively from the *PATH* directory instead of from the root directory.

**--detailed**

List detailed information about each file.

**--one-file-only**

Show information about one file only. Intended for use with both **--path** and **--detailed**.

**--ref="GLOB"**

File glob of additional WIMs or split WIM parts to reference resources from. This option can be specified multiple times. This option is only useful when **--detailed** is also specified.

**NOTES**

**wimlib-imagex dir** supports split WIMs, but it will only work on the first part of the split WIM.

DOS names and alternate (named) data streams are not listed unless the **--detailed** mode is used.

**EXAMPLES**

List all files in the first image of 'boot.wim':

```
wimlib-imagex dir boot.wim 1
```
